

Radio-frequency communication module (to use with controllers) 56x80 מ"מ

XJ100

- Radio communication system for controlling and supervising units
- Cover all application fields, from single benches to cold rooms and compressor racks
- The information coming from the controller are transmitted to an XJ100 module and directly sent to the XJ150 connected to the controlling and supervising unit
 - Possibility to connect many instruments to the same XJ100
 - XJ100 automatic "bridge" function to increase signal throughput between modules
 - Easy to use
 - Less installation time and costs
 - High flexibility
 - 0,25VA max power absorption
 - Operating frequency: 433,5068MHz
 - Range: 80m (no obstacles)
 - Wall or panel mounting
 - Power supply:
 - XJ100 (5Vdc directly from the controller);
 - XJ150 (5Vdc from PWS150J module)
